PROFESSIONAL SUMMARY

Entry-level Cloud DevOps professional with hands-on knowledge of AWS Cloud, Linux, Git, Jenkins, Docker, Kubernetes, Terraform and CI/CD pipelines. Completed practical deployment projects involving web and three-tier applications using AWS and DevOps tools. Skilled in cloud infrastructure, automation, containerization, application deployment and troubleshooting.

EDUCATION

B.E. in Computer Science | Acs college of engineering Bengaluru / VTU
Graduation Year: 2025 | CGPA: 6.66%

EXPERIENCE / TRAINING

DevOps Intern | Rooman Technology, Bengaluru | sep 2024 – feb 2025

- Practiced Linux administration, basic shell commands, permissions, services and log inspection in guided labs.
- Worked with Git/GitHub, Jenkins pipelines, Docker images/containers and Kubernetes fundamentals during training.
- Assisted with application deployment and configuration tasks using **DevOps tools and automation practices** in trainer-guided project

DevOps/Cloud Training | JSpider, Marathahalli Bengaluru | jul 2025 – feb 2026(on site)

- Completed hands-on DevOps and Cloud training covering AWS, Linux, Git/GitHub, Jenkins, Docker, Kubernetes, Terraform, Ansible, and CI/CD.
- Practiced AWS infrastructure provisioning and configuration, including EC2, VPC, subnets, security groups, and application deployment.
- Built and configured Jenkins CI/CD pipelines integrated with GitHub, Maven, SonarQube, and Nexus for automated application build and deployment.
- Worked on practical Docker and Kubernetes deployments, including containerization, Kubernetes resources, application scaling, and troubleshooting of deployment and infrastructure issues.

PROJECTS

Project 1: Zomato Web Application Deployment

- Deployed a Zomato web application on **AWS EC2** using a **Jenkins CI/CD pipeline** integrated with GitHub, SonarQube, and Nexus to automate build, code analysis, and artifact management.
- Configured **AWS VPC, subnets, and security groups** to provide controlled and secure network access to the application infrastructure.
- **Containerized the application using Docker and deployed it on Kubernetes**, improving deployment consistency and simplifying application scaling and management.
- Configured **Nginx** to host and expose the application through a public IP, enabling external access and reducing manual application deployment steps.

Project 2: Three-Tier Application Deployment

- Provisioned an **AWS EC2** environment and configured **Jenkins, Docker, and kubectl** to support automated application build and deployment.
- Created an **Amazon EKS cluster with worker nodes** and deployed a three-tier application consisting of **frontend, backend, and database** components.
- Developed a **Jenkinsfile-based CI/CD pipeline** integrated with GitHub to automate application build and deployment, reducing repetitive manual deployment tasks.
- Implemented **Kubernetes Secrets, PersistentVolumes (PV), and PersistentVolumeClaims (PVC)** to improve secure configuration management and provide persistent storage for application components.

TECHNICAL SKILLS

Operating Systems	Linux/Windows
Cloud	AWS (Ec2 , S3, VPC, CloudWatch, Lambda, IAM, Rds) / Azure
CI/CD & Version Control	Jenkins, Git, GitHub
Containers	Docker, Kubernetes
Build / Quality Tools	Maven, Nexus, SonarQube
Scripting / IaC	Bash, Python, Terraform
Networking	TCP/UDP, OSI Model, Subnetting, DNS, HTTP/HTTPS, SSH.

CERTIFICATIONS

DevOps intern – Rooman tech view certificate
DevOps/Cloud trainee – JSpider, view certificate
Networking Basics – Cisco view certificate
